Risk and Reward Profile

This risk profile is based on historical data and may not be a reliable indication of the future risk profile of the Fund. The risk category shown is not guaranteed and may change over time. The lowest category does not mean risk free. It is possible that a fund stated to have a lower risk profile may in fact fall in value more than a fund with a higher risk profile.

The Fund is in category 2 as it mostly invests in high quality, short-term, debt securities.

The capital is not guaranteed.

Other Material Risks:

- **Market risk** - the value of assets in the Fund is typically dictated by a number of factors, including the confidence levels of the market in which they are traded.
- **Operational risk** - material losses to the Fund may arise as a result of human error, system and/or process failures, inadequate procedures or controls.
- **Liquidity risk** - the Fund may not always find another party willing to purchase an asset that the Fund wants to sell which could impact the Fund's ability to meet redemption requests on demand.
- **Custodian risk** - insolvency, breaches of duty of care or misconduct of a custodian or sub-custodian responsible for the safekeeping of the Fund's assets can result in loss to the Fund.
- **Interest rate risk** - when interest rates rise, bond prices fall, reflecting the ability of investors to obtain a more attractive rate of interest on their money elsewhere. Bond prices are therefore subject to movements in interest rates which may move for a number of reasons, political as well as economic.
- **Credit risk** - the failure of a counterparty or an issuer of a financial asset held within the Fund to meet its payment obligations will have a negative impact on the Fund.

- **Derivatives risk** - derivative instruments are highly sensitive to changes in the value of the underlying asset that they are based on. Certain derivatives may result in losses greater than the amount originally invested.
- **Counterparty risk** - a party that the Fund transacts with may fail to meet its obligations which could cause losses.
- **Sustainability risk** - an environmental, social or governance event or condition that could cause the value of the portfolio to go down. Examples of sustainability risks include physical environmental risks, climate change transition risks, supply chain disruptions, improper labour practices, lack of board diversity and corruption.
- For more detailed information on the risks associated with an investment in the Fund, please refer to the section in the Prospectus entitled “Risk Considerations” and discuss with your professional advisers.
